

**Standard & Poor's Identification of Michigan's "Benchmark Schools"
at the Elementary and Middle Grade Levels**

Decades of independent research have found that the overall achievement levels of schools tend to be correlated with their students' socio-economic circumstances. The higher the enrollment of economically disadvantaged students, the lower the overall achievement *tends* to be. However, there are a number of exceptions to this trend.

Standard & Poor's analysis of Michigan's student achievement and demographic data has found that poverty is not destiny. Different schools with the same percentage of low-income students show a significant range of proficiency rates on the Michigan Educational Assessment Program (MEAP) tests in reading, writing, and mathematics. Some schools have continually performed above the level of other schools serving the same percentage of disadvantaged students.

In the spring of 2005, Standard & Poor's identified these "benchmark schools" for the Michigan Benchmarking Institute. The Institute's purpose is to help schools make Adequate Yearly Progress under the No Child Left Behind Act. This is done by bringing school improvement teams together in a spirit of professional inquiry to help them identify and replicate some of the benchmark schools' most "promising practices" in reading, writing, and mathematics.

To be identified as a benchmark school, each school had to meet the following criteria:

- For at least two consecutive years (2003 and 2004), the school's overall proficiency rates on one or more of six MEAP tests had to be above the range typically associated with other schools that serve the same percentage of low-income students. (Some schools outperformed their demographic peers for three consecutive years.)
- At least 10% of the school's students had to receive free or reduced price lunch due to family income levels.
- For purposes of statistical reliability, at least 30 students had to take the MEAP test in which the school demonstrated comparatively high performance.

Across the state, there are:

- 88 benchmark schools in fourth-grade math;
- 77 benchmark schools in fourth-grade reading;
- 66 benchmark schools in fourth-grade writing;
- 29 benchmark schools in seventh-grade reading;
- 38 benchmark schools in seventh-grade writing; and
- 32 benchmark schools in eighth-grade math.

These benchmark schools have been listed in alphabetical order by the town or city in which they are located. Each listing also provides the name of the principal, the school address, and the MEAP test(s) in which the school demonstrated relatively higher performance than most other schools with similar percentages of economically disadvantaged students.
